SUMMARY

A highly motivated IT Developer with nearly two years of experience in the banking industry at PT Bank Negara Indonesia (BNI). Proficient in full-stack development with a strong focus on backend technologies like Golang, Java, and .Net. Skilled in the entire development lifecycle, from building robust REST APIs and managing databases (Oracle, PostgreSQL) to conducting System Integration Testing (SIT) and deploying applications using Docker and Kubernetes. Passionate about creating reliable and scalable fintech solutions.

TECHNICAL SKILLS

Golang, Java, .Net, React, Oracle Database, PostgreSQL, Redis, REST APIs, WebServices, Oracle Weblogic, Docker, Kubernetes, Openshift, Jenkins, System Integration Testing (SIT), Laravel, Node.js, MQTT, Google Charts, Tailwind CSS

WORK EXPERIENCE

PT. Bank Negara Indonesia (Persero), Tbk

IT Developer (by PT. Adi Data Informatika) | May 2024 - Current

- Developed and maintained the BNI Smart Remittance application as a fullstack developer, focusing on user experience improvements, backend service reliability, and compliance with remittance standards.
- Implemented biller functionalities for BNI Direct platform using Gateway architecture.
- Conducted System Integration Testing (SIT) for systems including Payroll, Bulk Payment, BI-FAST, RTGS, LLG, Inhouse Transfer, Bill Payment, etc.
- Performed database performance assessment in collaboration with DBA team, implementing query optimizations, index strategies, and structural improvements to enhance system performance.
- Implemented security measures and best practices recommended by security team to ensure application compliance with banking industry standards and data protection requirements.
- Collaborated with cross-functional teams using Waterfall methodology in developer team environment.
- Participated in User Acceptance Testing (UAT) sessions with business stakeholders to validate system functionality.

Institut Teknologi Sumatera

Frontend Developer | June 2023 - June 2023

- Conducted the development of ITERA procurement websites, including login, dashboard, profile, and user pages.
- Enhanced website diagrams with Google Charts for clearer visuals and implemented Tailwind CSS.

PROJECTS

Seelogy - Desktop Log Analysis Application | 2024

- Created Seelogy, a desktop application for log tracking, server log analysis, and log search to improve debugging efficiency.
- Designed intuitive user interface for developers to easily navigate through large log files and identify critical issues.
- Implemented advanced search functionality with filters and real-time log monitoring capabilities.

Booking Room App | January 2024 - January 2024

- Developed a Go-based Restful API for company room bookings.
- Utilized PostgreSQL for the database, JWT tokens for authentication, and followed clean architecture principles with unit testing.
- Containerized the application using Docker for streamlined deployment on a server.

IoT-based Mirror Bike Therapy Monitoring System | September 2022 - May 2023

- Developed an IoT-based mirror bike therapy monitoring system for post-stroke patients, tracking heart rate, oxygen saturation, pedal rotation, calories burned, and therapy duration.
- Used MQTT protocol for communication, ensuring minimal delay, high throughput, and no packet loss.
- Built the website with Laravel MVC for efficient development and employed Node.js as the server-side communication for seamless interaction between hardware and the web.
- Managed server installation, deploying websites on an Nginx server on a Linux OS VPS.

CERTIFICATIONS & TRAINING

Enigma Camp - Backend Developer | October 2024, January 2024

- Participated in the Enigma Camp bootcamp, a program focused on developing comprehensive skills in software development.
- Learned the Golang programming language through intensive study and practical application.
- Acquired advanced skills in developing REST APIs, including designing endpoints, handling requests, and implementing best practices for API security and scalability.
- Developed a deep understanding of database management, including schema design and complex queries.
- Specialized in authentication and authorization techniques using JWT (JSON Web Tokens).
- Demonstrated expertise in unit testing methodologies to ensure software reliability.
- Applied clean architecture design patterns to create well-structured and maintainable software.
- Gained proficiency in deployment process to servers using Docker and containerization.

EDUCATION

Institut Teknologi Sumatera - Lampung, Indonesia

Bachelor of Engineering, Electrical Engineering | 2019 - 2023

- GPA: 3.2
